

NAME

TAP::Base - Base class that provides common functionality to *TAP::Parser* and *TAP::Harness*

VERSION

Version 3.38

SYNOPSIS

```
package TAP::Whatever;

use base 'TAP::Base';

# ... later ...

my $thing = TAP::Whatever->new();

$thing->callback( event => sub {
    # do something interesting
} );
```

DESCRIPTION

TAP::Base provides callback management.

METHODS

Class Methods

callback

Install a callback for a named event.

get_time

Return the current time using Time::HiRes if available.

time_is_hires

Return true if the time returned by get_time is high resolution (i.e. if Time::HiRes is available).

get_times

Return array reference of the four-element list of CPU seconds, as with *"times"* in *perlfunc*.
