

NAME

TAP::Parser::Result::Bailout - Bailout result token.

VERSION

Version 3.38

DESCRIPTION

This is a subclass of *TAP::Parser::Result*. A token of this class will be returned if a bail out line is encountered.

```
1..5
ok 1 - woo hooo!
Bail out! Well, so much for "woo hooo!"
```

OVERRIDDEN METHODS

Mainly listed here to shut up the pitiful screams of the pod coverage tests. They keep me awake at night.

`*as_string`

Instance Methods**explanation**

```
if ( $result->is_bailout ) {
    my $explanation = $result->explanation;
    print "We bailed out because ($explanation)";
}
```

If, and only if, a token is a bailout token, you can get an "explanation" via this method. The explanation is the text after the mystical "Bail out!" words which appear in the tap output.
