

NAME

Encode::EBCDIC - EBCDIC Encodings

SYNOPSIS

```
use Encode qw/encode decode/;
$posix_bc = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
$utf8 = decode("", $posix_bc);         # ditto
```

ABSTRACT

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

Canonical	Alias	Description

cp37		
cp500		
cp875		
cp1026		
cp1047		
posix-bc		

DESCRIPTION

To find how to use this module in detail, see *Encode*.
