

NAME

Encode::EBCDIC - EBCDIC Encodings

SYNOPSIS

```
use Encode qw/encode decode/;
   $posix_bc = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
   $utf8 = decode("", $posix_bc); # ditto
```

ABSTRACT

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

DESCRIPTION

To find how to use this module in detail, see *Encode*.
