

#### NAME

Encode::Byte - Single Byte Encodings

#### **SYNOPSIS**

```
use Encode qw/encode decode/;
$greek = encode("iso-8859-7", $utf8);  # loads Encode::Byte implicitly
$utf8 = decode("iso-8859-7", $greek);  # ditto
```

## **ABSTRACT**

This module implements various single byte encodings. For most cases it uses \x80-\xff (upper half) to map non-ASCII characters. Encodings supported are as follows.
