

#### NAME

DBM\_Filter::compress - filter for DBM\_Filter

#### **SYNOPSIS**

```
use SDBM_File; # or DB_File, GDBM_File, NDBM_File, ODBM_File
use DBM_Filter;

$db = tie %hash, ...
$db->Filter_Push('compress');
```

# **DESCRIPTION**

This DBM filter will compress all data before it is written to the database and uncompressed it on reading.

A fatal error will be thrown if the Compress::Zlib module is not available.

# **SEE ALSO**

DBM\_Filter, perIdbmfilter, Compress::Zlib
