

NAME

Encode::KR - Korean Encodings

SYNOPSIS

```
use Encode qw/encode decode/;
$euc_kr = encode("euc-kr", $utf8);  # loads Encode::KR implicitly
$utf8 = decode("euc-kr", $euc_kr); # ditto
```

DESCRIPTION

This module implements Korean charset encodings. Encodings supported are as follows.

```
Canonical Alias Description
euc-kr
       /\beuc.*kr$/i EUC (Extended Unix Character)
      /\bkr.*euc$/i
ksc5601-raw Korean standard code set (as is)
cp949
         /(?:x-)?uhc$/i
         /(?:x-)?windows-949$/i
          /\bks_c_5601-1987$/i
                         Code Page 949 (EUC-KR + 8,822
                         (additional Hangul syllables)
MacKorean EUC-KR + Apple Vendor Mappings
johab JOHAB
                        A supplementary encoding defined in
                                  Annex 3 of KS X 1001:1998
iso-2022-kr
                        iso-2022-kr
                                                 [RFC1557]
______
```

To find how to use this module in detail, see Encode.

BUGS

When you see charset=ks_c_5601-1987 on mails and web pages, they really mean "cp949" encodings. To fix that, the following aliases are set;

The ASCII region (0x00-0x7f) is preserved for all encodings, even though this conflicts with mappings by the Unicode Consortium.
